**Concordances**

This service provides a centralized platform to save, store, retrieve and manage mappings of the coli-conc and other related projects. The database of this web application contains currently 250.500 mappings of library KOS.

**Coli-ana**

The Coli-ana tool analysis and decomposes automatically DDC-synthesized notation number and displays the same in different formats (XML, JSKOS,...). The results of this tool present a great value for subject indexers, end-users and the research community.

**JSKOS-APIs**

The Webservice enables uniform access to KOS data queried by KOS notation and URI and displays the results in JSKOS format.

**Coli-conc glossary**

The Coli-conc glossary contains terms and definitions on subject indexing, KOS and Information technology and is an online help documentation for Coli-conc services.

**Stand-alone Services**

**KOS Registry**

The KOS registry contains a list of various kinds of KOS that are of potential interest to the Coli-conc partners. These KOS have been described with metadata based on the NKOS AP metadata scheme and are continually updated in collaboration with BARTOC.
